

# FOOD & BEVERAGES SALES REPORT ANALYSIS

(using SQL)

Prepared by: ASHISH MEHRA

# INTRODUCTION

The objective is to extract meaningful insights that can help us understand sales trends and make informed business decisions.

In this project we will be discussing the sales performance of the company over the past three years (2019, 2020, and 2021). I have analyzed sales data using **SQL queries** to gain insights into product categories, sales channels, and team performance. The data used for this analysis comes from two CSV files: One containing Product information and the other containing Sales information.

To begin our analysis, I first loaded the data into SQL Server and rename the files name, Product to Food and Beverages1 and Sales to Food and Beverages2.

# Always familiar with your Data

```
SELECT * FROM Food_and_beverages1
```
